

Vision Area 5: Chronic Disease

Objective 35: Reduce the rate of hospitalizations related to Alzheimer's disease and other dementias

In the United States, an estimated 5.4 million people are living with Alzheimer's disease. In Maryland, there were 999 hospitalizations for Alzheimer's or other dementias in 2010. Reducing the proportion of hospitalizations related to Alzheimer's and other dementias can decrease burdens on individuals, families, and the health care system and can signify improvements in primary care.

Statistics and Goals

Measure: Rate of hospitalizations related to Alzheimer's or other dementias (per 100,000 population)
